Product one-pager

# MetriXFreight L63x

Long-goods measurement · bulky freight

## Long goods, one pass. Up to 650 cm in ~ 200 ms.

The ceiling-mounted measuring system for pipes, profiles and long crates: the whole object captured at once — no partial measurements, no tape measure.

### THE PAIN IT SOLVES

> Long goods are often the last thing a terminal automates. So someone measures by hand, which costs time at the dock and produces numbers people argue about later. The L63x captures the whole object in a single pass, so your bulky freight finally gets dimensions that hold up in planning and billing.

### 01 WHO USES IT

- **Freight terminals**
  Dimension pipes, profiles and long crates at the dock instead of setting them aside.
- **Volumetric billing**
  Bill long goods by volumetric weight on legal-for-trade measurements.
- **Load planning**
  Plan trailer and container space with measured lengths, not estimates.
- **Damage documentation**
  Photos of every object record the condition of each shipment, ready for any claim.

### 02 WHAT IT DELIVERS

| 300 – 600 / h | ± 2 / ± 1 cm | up to 6 |
|---|---|---|
| Shipments per hour, incl. scan | L × W / height, legal for trade | Photos per object |

### 03 WHY THIS APPROACH

- → **Out of the way, on the ceiling.**
  Mounted above the measuring zone: no floor space, no moving parts, and handling continues right underneath.
- → **A platform, not a single system.**
  The L63x connects to the same MetriXFreight cloud as the rest of the portfolio. Remote and predictive maintenance are standard.
